

## VIA EXTERIOR.

The Via architectural signage system, designed in collaboration with international architecture firm C.F. Møller, is a simple exterior and interior system, whose Scandinavian roots are clear. Providing a flexible modular system, it can easily be adapted to complex wayfinding schemes in healthcare, education, leisure and transport hubs. The Via architectural signage system includes illuminated / non illuminated signage for both exterior and interior with flexible fixing systems adapting to building requirements including suspended (single or double sided), projecting, monoliths, wall and door signs.

Via is available in all standard colours with text applied either in UV-print, vinyl or ECO-print using both the outside and inside of the glass.
