

VIA INTERIOR.

The Via architectural signage system, designed in collaboration with international architecture firm C.F. Møller, is a simple interior and exterior system. Providing a flexible modular system it can easily be adapted to complex wayfinding schemes in healthcare, education, leisure and transport hubs.

The Via architectural signage system includes illuminated/non illuminated signage for both interior and exterior with flexible fixing systems adapting to building requirements including suspended (single or double sided), projecting, monoliths, wall and door signs.

Via Interior is an obvious choice for modular suspended or wall-mounted signs. The signs can easily be joined vertically or horizontally and are easy to install, update and clean. A complete series, VIA offers orientation, directional and identification signs. The look remains the same with or without LED lights.

Via Interior product line consist of:

- > Wall signs
- > Suspended signs
- > Projecting signs
